

0. Executive decision brief

The attached documents contain a developed proposal, several overlapping legal analyses, and operational controls. They do not contain a completed legislative bill, an executed operating agreement, or evidence of agreement by the Republican or Democratic parties. This review brings those materials into one traceable record without treating a later attachment as an automatic amendment to the repository.

Scope. Eleven supplied attachments; the Washington project repository at commit 3905b470c2ab239cf2aae563e1d7b3a1adb73dd3; five open project PRs and associated review records; targeted primary-source checks through September 5, 2026. Washington is the legal anchor and Pennsylvania the interstate comparator. This is a comparison and specification record, not an endorsement of adoption or a launch authorization.

Finding	What the record establishes
The drafts have different jobs	The concept introduces the format; the memorandum examines law; the participant protocol handles operations; the September PDF requests a pilot; the feasibility brief limits the legal conclusions. They are related work, not independent confirmations.
A notarial mechanism exists	Washington law authorizes relevant notarial acts. Whether a particular implementation satisfies the law and whether a particular statement creates liability remain separate questions. [L1-L4]
An institutional precedent exists	Washington publishes a voluntary campaign code. Clark County has a voluntary pledge project. Neither source establishes the effects of this proposed sworn-record format. [P1-P2]
Portability has distinct layers	Records and forms can be reused as designs. Notarial recognition, territorial criminal jurisdiction, recording rules, and offense elements remain jurisdiction-specific. [L5-L8]
Adoption and effectiveness are unestablished	No completed cross-party consultation, signed partner commitment, or evaluation of this exact program was supplied. Experimental oath research does not establish those facts. [D8-D11]

The concrete next review work is identifiable: reconcile the draft conflicts; specify the actual operator and decision authority; resolve the exact legal workflow; document invitation, review, appeal, publication and records rules; replace budget assumptions with actual commitments; and identify which outcomes an evaluation would measure. These are unfinished fields in the supplied proposal, not evidence that an organization has accepted them.

What “pass it” means remains a material choice. An organization's approval, an agency's participation, an appropriation, and enactment of legislation authorize different things. Sections 4.10 and 14 list the information needed to distinguish them. A vote on a pilot budget would not itself settle criminal jurisdiction, notarial compliance, or effectiveness.

Deliverable. The following pages provide a source comparison, legal distinctions, a common specification drawn from the existing proposal, an exception map, evaluation questions, and a decision record. No candidate or party is rated. Evidence is described by its source and scope; no numerical quality score is assigned.

Voluntary Factual Statements

Consolidated review and program specification

Prepared for Nolan Downard | September 5, 2026 | Version 1.0

1. Abstract

This targeted review compares eleven documents concerning a voluntary, recorded factual-statement format and checks selected legal, organizational and empirical sources. The record describes advance questions, exact answers and qualifications, a distinct optional notarial act, ordinary commentary, evidence review and corrections. Differences remain concerning nonparticipant publication, evidence categories, sequence of testing and the strength of legal language. Washington's notarial framework and existing voluntary campaign programs establish relevant mechanisms; they do not demonstrate the complete proposal's legality, effectiveness or political acceptance. The consolidated specification makes the existing choices and unresolved branches explicit so that different reviewers can examine the same proposal and source record.

2. Introduction

The user's stated objective is a detailed architecture from which short explanatory packets can be derived. The comparison therefore asks a narrower, documentable question: **what is already specified, what conflicts, and what additional decisions would a reader need to understand the full operation?** It does not infer what the GOP, DNC, any other party, or a prospective host wants from an absence of consultation data.

The proposal has several different objects: a claim, a participant's adoption of that claim, a notarial act, a published interview, an editorial review, and a possible legal dispute. Each has different evidence and responsible actors. One event does not answer every question about the others. [D4-D6, D9-D11; L1-L8]

3. Method and source boundaries

All eleven attachments were extracted locally for comparison. Word paragraphs and hyperlink relationships were inspected; the PDF was extracted by page. Separate review lanes examined draft differences, legal authorities, behavioral evidence and operational branches. The coordinating review checked source scope and current repository status. This is targeted research, not a registered systematic review, a comprehensive legal citator report or a fifty-state implementation audit.

The live Washington repository's default branch remained at the August 30 commit cited by the September PDF. A subsequent branch search identified five open PRs; selected actual files and review comments were then inspected, as recorded in section 4.1a. Its README says the work is not launch-cleared. The September attachments are additional materials for reconciliation; their appearance in this conversation does not amend the repository. Several earlier attachments also have counterparts on unmerged PR branches. An unchanged main branch is therefore not evidence that no other project work exists. The separate states/commonwealths packet names Sodelin/U.S.-Law-General; that reference is not evidence of a merger between the projects. [R1; D9 p.2; D10 section 14]

Citation key. D1-D11 identify supplied documents, listed in section 4.1. R1 identifies the checked repository. L entries identify legal authorities; P entries identify program and institutional sources; E entries identify empirical research. A description marked "synthesis" organizes the supplied design without representing a new legal holding or an adopted program rule.

Navigation. Section 4 contains the comparison and specification; sections 5-8 explain the separable inferences; section 9 defines terms; section 10 provides source links; sections 11-12 state process and inference limits; sections 13-14 support Zotero/Obsidian use and subsequent decisions.

4. Findings: the documentary record

4.1 What each attachment contributes

ID and supplied document	Function and relationship
D1: washington_sworn_format_concept_paper_v3.md	Introduces voluntary sworn and unsworn blocks, possible legal consequences and public signals. Contains early framing subsequently limited by later analysis.
D2: washington_sworn_format_pilot_packet_v2.md	Earlier pilot forms and operational account. Its text is closely related to D3; it is not a separate empirical source.
D3: washington_sworn_format_pilot_packet_v2-1.docx	Word version of the earlier pilot packet. Formatting and version comparison matter; counting it as independent corroboration would duplicate the same work.
D4: DGG_Washington_Participant_Sworn_Statement_Protocol_2026-08-30(1).docx	Detailed participant operations, consent, publication conditions, incident handling and division of custody. A separate attachment from the shorter repository control packet.
D5: PROJECT_ORIGIN_AND_DESIGN_RATIONALE_SUPPLEMENT(1).md	Explains evolution toward a fixed factual record, uncertainty, voluntariness and corrections. Expressly defers to the canonical memorandum on legal conflicts.
D6: Washington_Voluntary_Sworn_Format_Legal_Memorandum_v1.0(1).docx	Legal analysis and proposed control conditions; identifies Markdown in the repository as canonical. Contains wording requiring comparison with later constitutional analysis.
D7: ZOTERO_OBSIDIAN_INTEGRATION(1).md	Reference-management instructions. Does not establish that all cited items are already imported or related in the user's applications.
D8: BEHAVIORAL_EVIDENCE_AND_EVALUATION_PLAN(1).md	Behavioral hypotheses, rival explanations, measures and evaluation design. A research plan is not completed program data.
D9: Washington_Voluntary_Sworn_Statement_Pilot.pdf	September 5, 25-page proposal: precedents, 90-day schedule, illustrative budget, evaluation, district portability and interstate appendix.
D10: States-and-Commonwealths.docx	Constitutional terminology and status comparison; Washington-Pennsylvania application. Does not silently amend the Washington project.
D11: Voluntary-Factual-Statements-Feasibility.docx	September 5 legal feasibility brief. Separates authority, recognition, liability and audience effects. Does not itself evaluate effectiveness or amend the memorandum.

Repository record R1. The README, project-control document and Phase 0 operations packet were read at the checked commit. The repository distinguishes archival inputs from its canonical memorandum and source/gap ledgers. Its shorter operations packet includes neutral participation-status language; D4 has an additional audience-testing condition. Both versions are identified here rather than silently combined.

Agreement visible across the record. Participation is voluntary; the factual object is delimited; unknown, qualification and decline exist; the ordinary interview remains separate; notarization is not factual verification; corrections preserve a history; and interstate enforcement is not automatic. The source documents vary in wording and implementation details. [D1-D6, D9-D11; R1]

4.1a Active GitHub work and coordination

The main branch is only one part of the current record. Five open PRs were found and their current metadata checked. The additional review inspected selected files and comments to identify scope and unresolved dependencies; it did not re-audit every claim in every branch. [R2-R6]

PR and checked head	Content and dependency	Status in the inspected record
#1: 9b695f3e45e13d60767db71ed91cf4cc668c9d09	Origin, behavioral and integration supplements; based on main.	Open draft; does not replace canonical legal files.
#2: 96c5388421ed6e221c8520878458feba96e14aac	Candidate v1.1 sworn-record design and counsel packet; based on #1's branch.	Open draft; in-person Washington wet-ink design. Later counsel/review material limits activity to Phase 0 pending conditions.
#3: 08283fc190f23d69406b5f9cc810fbbc00d8b068	Paralegal audit and cross-project handoff; based on #2's branch.	Open draft; research and correction tickets do not themselves amend the operating documents.
#4: b99f7df6712a063e824922ede87b2c7ecca726f0	Independent project review labeled judicial audit; based on main.	Open, not draft; records unresolved changes and edits no operative protocol. It is a project review, not a court ruling.
#5: 73a036076096c0874478ccdfddc5e605378765a	Separate non-sworn DGG Claim Record explainer; based on main.	Open draft; additive alternative with no program oath, notary, jurat or penalty clause. It does not supersede #2.

Substantive difference visible across branches. Main/#1 describe a current-year remote electronic-record route. The v1.1 operational design in #2 restricts its proposed phase to in-person Washington use with a tangible record, and later review records withhold real-participant use pending conditions. #5 describes a separate public product without the program-created oath mechanism. These are different proposed scopes; this comparison does not select one.

Existing communication. #3 contains a packet-builder ticket register and judge-review questions. Review comments on #2/#3 and the #4 review record discuss conditions and implementation gaps. Notices on existing branches identify the separate #5 alternative. This is observable cross-project coordination in GitHub. It does not establish that any separate chat is currently running or has acknowledged this new September comparison.

Dependency is not disposition. The chain #1 to #2 to #3 describes PR bases. It does not mean merging the chain would resolve the contradictory procedures identified by the review. Likewise, GitHub's mergeability status describes a technical merge property, not legal clearance or agreement on the proposal.

This review's addition. A dated coordination note records these heads, the attached-source differences and bounded questions for the existing lanes. It leaves the current memorandum and competing proposal text intact. Subsequent changes can cite the specific record and implementation commit that resolves a question.

4.2 Differences that need an explicit decision

These are documentary differences. “Later” describes time, not authority to replace a controlling document.

Issue	Positions in the record	Unresolved reconciliation
Constitutional language	D6 section 0 uses “constitutional safe harbor.” D9 p.4 discusses unresolved constitutional limits on government enforcement.	A private invitation and a state prosecution are different acts. The phrase cannot establish blanket constitutional clearance. [L9-L10]
Publication of nonparticipation	D1-D2 present decline as a public signal. D4 section 5.6 conditions named statuses on audience testing. R1 gives neutral statuses with adjacent disclaimers.	Which publication rule governs, what testing is required, and whether named statuses appear at all.
Meaning of “sworn”	Early discussion sometimes describes an interview block. D5-D6 and R1 emphasize a defined adopted record.	Exact beginning/end, included attachments, later follow-up and relationship between a clip and the signed record.
Remote act in 2026	Early descriptions are broad. D6, D9 and R1 distinguish the fixed electronic-record workflow from explicit standalone remote-oath provisions effective in 2027.	Current-year script, record, certificate, platform configuration and implementing rules. [L2]
Evidence labels	D4 and D9 have different sets of editorial evidence categories.	A versioned dictionary and treatment of mixed, unresolved and noncheckable claims.
Notary role	Main includes notary approval of claim admission. The PR #2 review disputes a substantive content-approval role.	Distinguish the notary's statutory judgment and refusal from editorial approval of the proposition. [R3-R5]
Sequence	D4 separates nonpublic feasibility, audience testing and public use. D9 supplies a 90-day planning calendar.	A calendar does not specify what happens if an earlier condition remains unmet.
Preservation and publication	Early append-only language can be read as permanent public availability. D4 distinguishes restricted preservation from public access.	Rules for lawful restriction, redaction, public correction notices, legal holds and vendor closure.
Government involvement	D9 discusses possible public roles; D11 says a government-run format needs separate analysis.	Actual public actor, authority, funding, speech rules, records obligations and decision instrument.
Evidence of effectiveness	D8-D9 discuss experiments and evaluation. D11 explicitly does not evaluate audience effects.	Those statements have different scopes; D11 is not a finding that all external behavioral research is absent.

Version-control consequence. A consolidated release can identify a selected rule, its source, the person authorized to approve it, and the date of approval. Until such a decision exists, the record can show both formulations and the open question. This packet records the discrepancy; it does not assert that the author has adopted either rule on behalf of the project.

Public wording and underlying evidence. Short packets can cite a claim identifier linked to the source, jurisdiction, effective date, exceptions and unresolved issue. That relationship permits readers to inspect the scope of the statement without treating explanatory shorthand as a separate legal conclusion. [D5, D7, D9 sections 6-8; R1]

4.3 Legal facts and limits

Question	Source-grounded answer	What remains separate
Can a Washington notary administer relevant acts?	Chapter 42.45 defines and authorizes notarial acts, including verification on oath or affirmation. [L1]	The exact act and lawful execution of this program's documents.
What does verification on oath establish?	The officer determines required identity and attribution of the signature; the signer makes the truth declaration. [L1, section .030(2)]	Independent validation of the claim, sources, research inference or political conclusion.
What is false swearing?	RCW 9A.72.040 addresses a knowingly false statement under an oath required or authorized by law and classifies the offense as a gross misdemeanor. [L3]	Whether particular conduct satisfies every element and is constitutionally prosecutable in the relevant forum.
Is every false answer perjury?	No such conclusion follows. First-degree perjury adds materiality and an official proceeding; the definition includes language concerning notaries that requires analysis of the event. [L4]	Labeling the encounter private does not itself decide the statutory issue.
Does "I believed it" or correction end the inquiry?	RCW 9A.72.080 addresses unqualified assertions beyond actual knowledge. Section .060 states a bounded retraction defense for perjury or false swearing, subject to its timing and same-proceeding conditions. [L3-L4]	A project correction policy cannot supply criminal immunity or promise that a statutory defense applies.
Can a generic declaration replace the notary?	Chapter 5.50 gives qualifying unsworn declarations legal effect in specified circumstances. [L11]	Adding penalty-of-perjury words to any private statement does not itself establish the statutory route.
Is political inaccuracy generally prohibited?	Current RCW 29B.30.070 concerns specified defamatory political advertising and electioneering communications, with statutory conditions. [L12]	It is not authority for a general government determination of every political assertion.

Constitutional application. Rickert concerned Washington's regulation of campaign statements; Alvarez invalidated the challenged federal false-claim prohibition through differing rationales. Neither decision adjudicated this proposed voluntary interview format. Their treatment of false speech does not establish that all false speech is unprotected, or that the program has blanket immunity from constitutional questions. [L9-L10]

Current citation. The political-advertising provision is RCW 29B.30.070; the former reference was RCW 42.17A.335. Current and former section numbers can be retained together for source history, with the operative citation identified. [L12]

Unresolved facts for counsel. Exact questions and adopted answers; signer and notary locations; intended use; notary commission and endorsements; recording configuration; host entity and campaign relationships; public labels; and the contemplated government role. The supplied documents do not contain a signed legal opinion covering all those facts. [D4, D6, D9, D11; R1]

4.4 Interstate and date-dependent branches

Location combinations described by the proposal

Notary / signer	Relevant distinction	Present limit of this review
Washington / Washington, in person	Commission, authorized act, identity, adopted record and certificate. [L1]	An available mechanism is not a completed approval of a specific form.
Washington / Washington, remote	Current remote-notarial requirements also apply. [L2]	An ordinary video call is not evidence of compliance with identity, recording and record requirements.
Washington / Pennsylvania, remote	Washington remote authority and Pennsylvania recognition are distinct from territorial criminal jurisdiction. [L2, L5-L7]	A participant's consent does not alone create prosecutorial jurisdiction.
Notary physically in Pennsylvania under only a Washington commission	Receiving-state recognition of an act does not authorize a Washington notary to exercise that office wherever the notary travels. [L1-L2, L5]	This review does not clear that configuration or substitute for Pennsylvania authority.

Pennsylvania offense wording. Washington's false-swearing provision includes oaths required or authorized by law. Pennsylvania's "other false swearing" provision refers to a statement required by law to be sworn or affirmed; its official-matters provision has separate conditions. A voluntary appearance cannot be assumed to satisfy the same offense elements in both states. [L3, L8]

Recognition is one legal question. Pennsylvania recognizes qualifying acts performed by authorized officers in another state. That does not establish truth, every evidentiary admissibility requirement, Washington territorial jurisdiction, or an interstate surrender procedure. Pennsylvania's use of "Commonwealth" does not create a separate statehood barrier to the recognition statute. [L5-L8; D10 section 4.8]

September 2026 versus January 2027

The official RCW 42.45.280 page displays both current and future text. The version effective January 1, 2027 expressly adds a standalone remote oath or affirmation procedure and additional tangible-record procedures. The repository's 2026 design uses a defined signed electronic record and verification on oath or affirmation. Later law is not present authority for an earlier act. The precise 2027 workflow still depends on its operative text and implementing rules. [L2; R1]

Recording has a concrete technical constraint. WAC 308-30-330 requires the retained remote-notarial audiovisual recording to exclude images of the electronic record that is the subject of the act. It also specifies secure access, backup, at least ten years of retention and continuity arrangements. This is a separate object from a host's consented production recording or a public display of a signed statement. [L13]

Unresolved implementation detail. The evidence does not establish that a proposed screen-sharing or recording configuration meets that constraint. The record needs the actual platform behavior and the notary's retention arrangements; a conceptual diagram cannot verify either. [D4, D9; L13]

4.5 Existing programs and institutional roles

What the precedents establish

Washington's Fair Campaign Practices Code is in WAC 390-32. The companion rule expressly states that failure to subscribe is not a violation of Title 29B. The chapter also describes a complaint-publication process involving a complaint and opportunity for response, subject to the rule's conditions. That process is a distinct published procedure, not an evaluation of this proposal. [P1]

The League of Women Voters of Clark County describes its Fair Campaign Practices Project and invitations to registered candidates. Its pledge materials demonstrate that a voluntary campaign-conduct program is administered. A signer list is an administrative record; it does not establish a causal effect on factual accuracy, voter comprehension, or acceptance of a notarized variant. [P2]

Activity	Documented or proposed character	Separate implementation question
Existing conduct pledge	A participant subscribes to described campaign practices. [P1-P2]	What facts show compliance with that pledge?
Proposed factual record	The speaker adopts defined answers, sources and qualifications. [D4-D6]	Which propositions and attachments are included?
Proposed optional notarial act	A legally specified act is associated with the record. [D9]	Is the exact act correctly performed, and what consequences follow?
Editorial evidence review	Reviewers examine claims and preserve reasons. [D8-D9]	What are the coding rules, disagreement procedure and correction rights?
Public administration	A public actor would operate or support an activity. [D9, D11]	Which authority, funds, obligations and constitutional constraints apply?

Organizational status matters

“Open to people from different parties” describes access. It does not establish that the operator is institutionally nonpartisan, has a particular tax status, or qualifies for a campaign-finance exception. D9 p.9 expressly leaves the actual contracting entity, control, funding and campaign relationships to be identified.

IRS guidance for a 501(c)(3) organization's candidate appearances describes equal opportunity for candidates seeking the same office, absence of support or opposition, and no political fundraising. Its application depends on the actual event and organization. Merely calling a program educational is not the missing factual analysis. [P3]

Federal candidate-debate rules also have defined requirements. FEC guidance describes eligible staging organizations, at least two candidates, event structure and pre-established objective selection criteria. A series of one-person interviews is not automatically a debate within that framework. Federal guidance is not a substitute for analysis of a Washington state/local event. [P4]

No supplied source establishes that Digital Ground Game, the RNC, DNC, a state party, or a public agency has committed to this program. National party committees, state parties, local organizations and individual campaigns are distinct possible participants; one actor's approval would not document the others' approval.

4.6 The common specification in the drafts

The following is a descriptive synthesis of D4-D6, D8-D9 and R1. It records the existing proposal's components and identifies details still awaiting an authorized decision.

Component	Existing specification	Unfinished fields
Invitation	Defined eligibility, advance questions, voluntary participation.	Covered offices, geography, timing, capacity limits, invitation log and nonresponse cutoff.
Claim definition	Exact factual proposition, scope, time period and qualifications.	Admission dictionary; treatment of compound claims, omissions and contested definitions.
Participant choice	Answer, qualify, state unknown, decline or use ordinary interview.	Actual wording and procedure for withdrawal at each stage.
Execution	Ordinary signed record and/or a separately identified notarial act.	Which variants the operator offers; final documents; current-law workflow.
Evidence review	Sources, reasons and reviewer disagreement are recorded.	Reviewer appointments, conflicts, escalation, publication of contrary evidence.
Publication	Factual record and ordinary commentary remain distinguishable.	Release, public labels, clip rules, timing, accessibility and disputed-content notice.
Correction	Dated linked updates with original evidence preserved.	Public versus restricted preservation; meaning-changing edit rules; response deadline.
Appeal	D9 identifies an appeal reviewer separate from the interviewer/adviser.	Jurisdiction, standing, appointment, deadline, outcome notice and further review.
Custody	Notarial compliance archive and host/public records are separate.	Actual custodians, access controls, retention classes, backup and exit arrangements.
Evaluation	Recruitment, information yield, accuracy, comprehension, burden and harms.	Registered question, sample, comparison, outcomes and analysis before data collection.

A traceable public statement

A short packet's claim can point to an identifier such as LEGAL-WA-003. Its supporting record can contain: exact text, source, pinpoint, jurisdiction, effective period, interpretation limits, unresolved question, responsible reviewer and revision date. This is the relationship already contemplated by the project's source ledger, gap matrix and reference-management notes. [D7; R1]

For example, "Washington authorizes relevant notarial acts" can cite chapter 42.45. The broader sentence "this program is lawful everywhere" would require additional authority and facts that this record does not supply. A single link to the notarial chapter cannot substantiate both statements. [L1-L8]

Execution and evidence are different fields

A record may have an execution state, a review state and a publication state at the same time. Completion of the notarial act does not resolve the evidence review. A later dispute does not rewrite what was signed. Restricted public access does not necessarily mean the underlying evidence was destroyed. These distinctions follow the source documents' separate lanes and custody rules. [D4, D9; R1]

4.7 Governance questions for a shared review

The documents call for consistent treatment across viewpoints but do not supply an executed governance charter. The following questions allow prospective participants to examine the same allocation of authority. No answers from a party or organization are inferred.

Decision to document	Concrete question	Relevant role in the existing design
Ownership	Which legal entity signs contracts and bears operating duties?	Operator and its counsel
Scope	Which offices, people, claims and locations are covered?	Operator's authorized decision-maker
Eligibility	How are invitations, capacity limits and exceptions recorded?	Program administrator
Funding	Who pays, what conditions apply, and who can direct spending?	Operator, funder and campaign-law counsel
Appointments	Who appoints and can remove editors, reviewers and appeal reviewers?	Governing body
Conflicts	What interests require disclosure or recusal, and who resolves a contested recusal?	Governing body and reviewer coordinator
Question control	Who admits, changes and locks questions? Can a sponsor alter them?	Editorial/participant roles; main's notary admission role is disputed in the PR #2 review.
Evidence disputes	What can be challenged: wording, sources, classification, omission or procedure?	Evidence reviewer and appeal reviewer
Deadlines	When are replies due, and how do corrections near an election appear?	Publication authority under its approved rules
Notary independence	Who can pause or refuse the act?	Notary retains responsibility under the notarial framework. [L1-L2]
Publication authority	Who can authorize an excerpt, restriction or corrected notice?	Editor, custodian and counsel within an actual release
Rule changes	Which version applies to an ongoing case and how are exceptions recorded?	Governing body
Closure	Who maintains links, correction channels and restricted custody if the operator closes?	Named successor custodian and applicable notarial custodian

Documented agreement has a scope. A signature can indicate agreement to participate, agreement to a procedure, funding approval, acceptance of a legal opinion's scope, or support for legislation. Those are different records. A logo, invitation or meeting attendance does not establish all of them.

An opposition or disagreement record can remain specific. A prospective reviewer may dispute the oath, the publication rules, the costs, the invitation procedure, or a proposed government role. Recording the exact provision and proposed amendment keeps that disagreement distinct from a claim about the reviewer's honesty or motives. This follows the drafts' instruction not to infer deception from refusal. [D4-D6, D9; R1]

Process observations. The evaluation plans include invitations, conflicts, verification effort and publication decisions. Small uncontrolled samples do not establish equal treatment across groups. [D8-D9]

4.8 Exception map: claims and execution

This map describes existing controls and their unresolved implementation details. It is not an executed operating procedure. Sources: D4 sections 3-6; D9 sections 4.5-4.9 and appendix; R1 operations packet.

Trigger	Existing documentary treatment	Detail still needed
Forecast or value judgment	Separate from the sworn factual record; ordinary commentary remains available.	Whether a narrower present-tense claim can be admitted and who decides.
Compound or ambiguous prompt	Pause, define terms or separate propositions.	Approved definitions and exact revised version.
False premise	Qualification or correction is available.	Record of the disputed premise and whether the question is withdrawn.
Source-dependent answer	Identify the knowledge or record basis.	What the speaker is attesting: the source's content, its accuracy or an inference.
Unknown or not recalled	An explicit response is available; no need to guess.	Exact wording in the adopted record.
Confidential or privileged material	Consultation, qualification or decline are available.	Protected handling and whether a redacted claim can be reviewed.
Language or comprehension issue	Pause and address understanding.	Interpreter's role, translated record and consent; no invented legal sufficiency.
Participant changes an answer before signing	Correct the draft and recheck the record.	Version confirmation and source changes.
Participant seeks counsel or withdraws	Pause or stop; ordinary interview may remain an option.	Withdrawal rules at draft, signed, recorded and published stages.
Notary refuses or pauses	Host cannot override the notary.	Incident notation that does not characterize refusal as evidence of dishonesty.
Connection or identity step fails	Treat execution as incomplete and follow the regulated workflow.	Actual restart requirements and vendor behavior.
Wrong record is displayed	Stop before completion and reconcile the intended record.	How document identity and attachments are checked.
Signed record later changes	The source controls call for a new linked record and a new act when a new sworn statement is made.	Which changes are substantive and how public history is represented.

Three separate questions about a disputed answer: What was said? What evidence bears on it? Does the conduct satisfy a legal offense? The interview recording, editorial review and criminal-law analysis answer different questions. A project label is not a judicial determination. [D4, D9; L3-L4]

The unresolved-case record. A branch can contain an open question, temporary handling, responsible role, needed evidence and review date. The existing materials include stop and hold conditions. They do not establish that every future fact pattern has already been adjudicated. [D4; R1]

4.8 Exception map: publication and continuity

Trigger	Existing documentary treatment	Detail still needed
Person declines or never replies	Log the actual event without inferring falsity or intent.	D4's testing gate versus other versions' named neutral status; public cutoff and wording.
Claim remains unresolved	Distinguish unresolved from contradicted and noncheckable.	Reconciled evidence dictionary and publication timing.
Reviewers disagree	Preserve reasons; D9 describes an additional reviewer.	Appointment, conflicts, decision authority and appeal.
Participant challenges a review	Response and correction paths exist.	Filing requirements, time limits, decision reasons and notice.
New evidence arrives after signing	Preserve the prior record; publish any authorized linked update.	Whether update is sworn or ordinary; review responsibility.
Clip drops a qualification	D4/R1 require contextual review; D9 links excerpts to the record.	Material-context test, timecodes and remedy for an already distributed clip.
Identity information is exposed	Restricted notarial and identity material is not a publication asset.	Actual access controls, incident response and applicable notices.
Legal process or complaint arrives	Preserve records and route through counsel.	Recipient, valid process, privilege review and restrictions on disclosure.
A public item requires lawful restriction	D4 separates restricted evidence preservation from public access.	Redaction authority, public notice and retention basis.
Host, platform or vendor closes	D9 discusses continuity; notarial retention has its own legal requirements.	Successor, exports, funding, domain/URL continuity and contractual duties.
Signer or notary is in a new state	Apply the separate location/legal analysis.	State-specific authority, recognition, recording, liability and forum facts.
Operations cross January 1, 2027	Current and future statutory versions are distinct.	Rechecked law, rules, forms and platform configuration for the new date.

Sources: D4 sections 5-6; D9 sections 4.8-4.9, portability and interstate appendix; D11 sections 2-3; R1 operations packet; L2, L5-L8, L13.

Three record classes in the supplied design

Public record: authorized statement, public source links, publication labels, corrections and accessible explanations. **Restricted operational record:** invitation and consent evidence, unpublished production material, incident records and other access-controlled material. **Notarial compliance record:** records retained under the notary's duties and provider arrangements. The exact content and retention schedule for each class remain implementation facts. [D4, D9; R1; L13]

The distinction prevents an assumption that a public correction requires publication of identity-proofing material, or that removal from public display authorizes deletion of regulated records. The applicable law and actual custody agreements determine the latter duties. [L13]

4.9 Evidence and evaluation questions

No completed evaluation of this exact program was supplied or located in this targeted review.

The evidence record includes experiments on honesty commitments, general evaluation methods, and the existence of voluntary campaign programs. These are different types of evidence. [D8-D9; P1-P2; E1-E3]

The behavioral literature examines related interventions, not the complete proposed Washington format. A 2024 meta-analysis reported an honesty-norm subgroup effect of Hedges's $g = 0.27$ (95% CI 0.19–0.36) and evidence of publication bias. Its 91,683 participants and 445 effects cover all studied social-commitment types; those totals do not describe the oath subgroup alone. [Zickfeld et al., 2024](#).

A subsequent randomized megastudy assigned 21,506 US/UK participants to 21 oath variants or no oath in an incentivized online tax-reporting game. Pooled mean compliance was 86.2% with an oath and 82.3% without one; the authors reported $d = 0.09$. Compliance meant reported income divided by earned income. The experiment tested neither notarization nor criminal penalties, and its results are not an estimate of campaign effects. [Zickfeld et al., 2025](#).

This review inspected the megastudy's full text but verified the meta-analysis through its abstract and institutional record. The 2012 signing-position paper was retracted in 2021. A correction to the later Kristal replication appeared in 2026; its bibliographic record was verified, but the complete correction was inaccessible. Its substantive implications therefore remain unresolved here. [Retraction, correction record](#).

An oath experiment can examine behavior in its task and sample. It does not directly establish candidate recruitment, effects of notarization, criminal deterrence, public interpretation of a seal, or acceptance by a political party. A study of willingness to participate does not by itself estimate a change in factual accuracy. [E1-E2; D8-D9]

4.9 Evaluation questions and limits

Evaluation question in the drafts	Observation or comparison	Inference limit
Can the process be operated?	Invitations, completion, technical failures, time, cost and incidents.	Completion alone does not establish effectiveness.
Does the record contain more checkable information?	Specific claims and substantive answers per session, including unknowns and qualifications.	Fewer errors may reflect less information being offered.
Does offering an oath change behavior?	D9 describes randomized offers of notarized versus ordinary signed records with other procedures held comparable.	Offer effects include uptake; comparison of voluntary signers with nonsigners is confounded.
What changes because of documentation?	D9 identifies an ordinary-interview comparator as a separate design possibility.	Documentation, preparation, review and oath effects cannot be assumed identical.
What do audiences infer?	Identical evidence displayed with differing execution information; comprehension and calibrated confidence.	Increased trust can coexist with misunderstanding or false confidence.
How are errors repaired?	Linked corrections and elapsed time, distinguishing pre-signing and post-publication changes.	A correction is not proof of prior criminal intent.
How consistent is administration?	Invitation rules, conflicts, reviewer effort, appeals and publication decisions.	Small uncontrolled samples do not establish equivalence across viewpoints.

Units and denominators. Claims are nested within participants and sessions. Twenty participants with five claims each do not create one hundred independent participants. Attrition, nonresponse, source availability and unresolved claims affect interpretation. [D8-D9]

Existing numerical gates are proposed management choices. D9 mentions 10 completed sessions, an 80% claim-resolution target, and 90% comprehension among at least 100 volunteers. Those numbers are not findings or externally established standards. D9 labels them discussion thresholds. This comparison records them without adopting or rating them.

What evidence would change the factual assessment? Completed program data could establish recruitment and operational observations. A suitable comparison could support a bounded causal estimate. Replication in other populations and settings could test transfer. None would itself document party endorsement; that requires an actual organizational record.

4.10 Cost, authorization and the meaning of adoption

The supplied budget

D9 p.9 contains an illustrative economic cost of **\$21,960-\$40,920 for twenty sessions**, including setup and a 20% contingency. Its arithmetic is consistent with its line items. The PDF explicitly identifies the rates, hours and allowances as assumptions rather than bids or commitments. The total excludes litigation, paid political advertising, a custom application and an efficacy trial.

Budget element in D9	Amount range stated	Fact still absent
Legal review	\$6,000-\$12,000	Engagement scope, quote and authorized client
Coordination	\$2,800-\$4,500	Actual workload, appointment and compensation
Evidence review	\$3,000-\$5,600	Claims volume and verified review time
Production and accessible records	\$1,800-\$3,200	Deliverables, services and accessibility testing
Evaluation	\$2,400-\$4,800	Exact study design, investigators and costs
Notarial acts	\$300-\$500	Actual acts, quotes and related charges
Tools, access and travel	\$2,000-\$3,500	Vendor and access arrangements

The line items total \$18,300-\$34,100 before contingency. At exactly twenty completed sessions, total cost divided by sessions is \$1,098-\$2,046. This is arithmetic on the PDF's assumptions, not a price estimate independently obtained here. Long-term custody, renewal and closure arrangements also need to be identified in an actual operating budget. [D9]

Distinct decisions a reviewer might be asked to consider

Decision object	What its document would specify	What that decision would not establish
Research or rehearsal authorization	Scope, people, synthetic/participant materials, budget and outputs.	Authorization of later public deployment.
Organizational operating approval	Legal entity, selected protocol version, staff, funds, contracts and conditions.	Government endorsement or new criminal authority.
Public-agency participation	Actual agency, legal authority, activity, funds, duties and oversight.	Authority outside the enacted or existing delegation.
Legislative measure	Operative text, administering actor, powers, funding, procedures and effective date.	Correct performance of each future act or demonstrated program effect.

The supplied materials do not select and complete a legislative measure. Nor do they contain executed appointments, legal engagements, vendor agreements or participant releases covering the final workflow. Section 14 makes these missing facts reviewable without inventing an approving institution or policy choice.

5. Conclusion and analytical synthesis

5. Conclusion

The source record establishes that the proposal has a history, a legal foundation for relevant notarial acts, existing voluntary-program analogues, detailed operating ideas and a plan for evaluation. It does not establish complete legal clearance, actual organizational acceptance, a completed bill or measured effects of the full format. A consolidated specification can make those distinctions and the remaining decisions visible. [D1-D11; R1; L1-L13; P1-P4]

6. Deconstructive analysis: separate the claims

The proposal involves at least six propositions: an act is authorized; the chosen procedure performs it correctly; a receiving jurisdiction recognizes it; particular conduct satisfies an offense; the public understands the presentation; and an organization accepts the program. Each requires different evidence. Their coexistence in one packet does not permit evidence for one proposition to answer the others. [D10-D11]

The label “nonpartisan” also contains distinct factual questions: access, selection, ownership, funding, editorial control and institutional status. The documents describe intended access and symmetric procedures. They do not supply a completed organizational or campaign-finance determination. [D9 p.9; P3-P4]

7. Reconstructive analysis: start with one record

The smallest object in the existing design is a defined proposition with its source, scope and qualification. It can be associated with a participant's exact answer, a version, execution information, an evidence review and a correction. Those associations preserve different facts; they do not create a truth guarantee. [D4-D5; D9 section 7]

A hypothetical claim illustrates the distinction: “Report R states estimate X for population P during period T.” Reviewing R can address what the report says. It does not, without additional evidence, establish that X is accurate, that a policy caused X, or that the result will repeat elsewhere. The same distinctions apply whether the claim is sworn or ordinarily signed. [D11 section 1]

8. Middle-out synthesis: connect the record to administration

Between the individual statement and a public-facing packet are the rules for who asks, reviews, publishes, corrects and hears disputes. The source files contain many of these controls but leave institutional appointments, deadlines and version choices open. The exception maps in section 4 make that intermediate layer explicit.

For portability, D9 separates a common documentation design from local implementation supplements. D10-D11 demonstrate why a new state supplement must examine substantive law, not just substitute a state name. These documents do not establish an interstate agreement or a nationwide enforcement system.

The completed work here is a **comparison and reference specification**. It is suitable for readers to examine the same evidence and open questions; it is not a statement that those readers agree with the proposal.

9. Glossary

Term	Meaning in this review
Factual proposition	A defined assertion whose content can be examined using relevant evidence; its checkability does not establish truth.
Verification on oath or affirmation	A notarial act involving a signed record and the signer's declaration concerning its truth; statutory duties remain distinct from editorial fact-checking. [L1]
Execution status	What signing or notarial process occurred and when. It does not state that the claim is correct.
Evidence-review status	What the review process concluded, with reasons and uncertainty; it is not a legal verdict.
Publication status	Whether material is draft, held, released, corrected or restricted under the applicable procedure.
False swearing	The Washington statutory offense described in RCW 9A.72.040; application depends on elements and facts. [L3]
Perjury	A separate statutory offense; first-degree perjury includes materiality and an official proceeding. [L4]
Recognition	A receiving jurisdiction gives a qualifying notarial act legal effect under its law. [L5]
Territorial jurisdiction	Legal authority tied to a jurisdiction's connection with conduct and consequences; distinct from recognition. [L6-L7]
Ordinary signed record	The proposal's documentation comparator; any legal implications depend on its actual wording and use.
Append-only correction	A new linked record preserving history. It does not by itself require unlimited public access to protected material.
Pilot	A bounded proposed implementation or feasibility exercise; the word alone specifies neither methodology nor permission.
Counterfactual	What would have occurred under the comparison condition; needed to interpret a causal claim.
Intention to treat	Analysis according to assigned offer or condition, including noncompliance; distinct from comparing only completers.
Commonwealth	For Pennsylvania and the other state commonwealths, a formal designation that does not create a different federal category of statehood. Territorial uses require different analysis. [D10]

10. Bibliography: legal authorities

All web authorities below were checked in this targeted review on September 5, 2026. The listed provisions support the specific claims cited above; the list is not a representation of complete later-treatment research.

- **L1. Washington Legislature.** Chapter 42.45 RCW: Revised Uniform Law on Notarial Acts. Definitions, authority, verification duties, refusal and certificate provisions; relevant sections .010, .020, .030, .060 and .140.
- **L2. Washington Legislature.** RCW 42.45.280: Electronic records notary public. Distinguish current text from the version effective January 1, 2027.
- **L3. Washington Legislature.** RCW 9A.72.040: False swearing; RCW 9A.72.080: Statement of what one does not know to be true.
- **L4. Washington Legislature.** Chapter 9A.72 RCW: Perjury and interference with official proceedings. Definitions, perjury and limited retraction provision, especially .010, .020 and .060.
- **L5. Pennsylvania General Assembly.** 57 Pa.C.S. chapter 3, section 311: Notarial act in another state. Recognition, not an export of all Washington criminal law.
- **L6. Washington Legislature.** RCW 9A.04.030: State criminal jurisdiction.
- **L7. Pennsylvania General Assembly.** 18 Pa.C.S. chapter 1, section 102: Territorial applicability.
- **L8. Pennsylvania General Assembly.** 18 Pa.C.S. chapter 49, section 4903: False swearing.
- **L9. Rickert v. State, Public Disclosure Commission**, 161 Wn.2d 843, 168 P.3d 826 (2007). Opinion and concurrence concerning the challenged Washington campaign-statement provision; current legislature's account appears with RCW 29B.30.070. This is not a holding on the proposed pilot.
- **L10. United States v. Alvarez**, 567 U.S. 709 (2012). Supreme Court opinion reproduced by Cornell LII. Plurality and concurrence used different rationales; distinguish the actual holding from broader propositions.
- **L11. Washington Legislature.** Chapter 5.50 RCW: Uniform Unsworn Declarations Act.
- **L12. Washington Legislature.** RCW 29B.30.070: Political advertising or electioneering communication, libel or defamation per se. Formerly RCW 42.17A.335.
- **L13. Washington Department of Licensing rules.** WAC 308-30-330: Retention of audiovisual recordings and repositories.

10. Bibliography: institutions and research

- **P1. Washington Public Disclosure Commission rules.** [Chapter 390-32 WAC: Fair Campaign Practices Code](#). Sections .010, .020 and .030 address the code, voluntary subscription and complaint publication.
- **P2. League of Women Voters of Clark County.** [Fair Campaign Practices Project](#). Program-owner page and accessible signer/2025 materials; linked 2026 packet contents were not retrievable in this review.
- **P3. Internal Revenue Service.** [Inviting a candidate to speak: 501\(c\)\(3\) political-campaign-intervention FAQ](#).
- **P4. Federal Election Commission.** [Public debates](#). Guidance linking 11 CFR 110.13 and 114.4(f); not clearance for an individual interview or every state/local event.
- **E1. Zickfeld et al. (2024).** Committed (dis)honesty: A systematic meta-analytic review of the divergent effects of social commitment to individuals or honesty oaths on dishonest behavior. *Psychological Bulletin, 150*(5), 586-620. DOI: [10.1037/bul0000429](https://doi.org/10.1037/bul0000429). Abstract and institutional record checked; full text not re-extracted here.
- **E2. Zickfeld et al. (2025; online 2024).** Effectiveness of ex ante honesty oaths in reducing dishonesty depends on content. *Nature Human Behaviour, 9*, 169-187. DOI: [10.1038/s41562-024-02009-0](https://doi.org/10.1038/s41562-024-02009-0). Full article inspected via an author-institution copy.
- **E3. U.S. Government Accountability Office (2012).** [Designing Evaluations: 2012 Revision](#). GAO-12-208G. Evaluation methods, not a study of this program.
- **E4. PNAS (2021).** [Retraction of the 2012 signing-position article](#). DOI: [10.1073/pnas.2115397118](https://doi.org/10.1073/pnas.2115397118).
- **E5. PNAS (2026).** [Correction for Kristal et al.](#). DOI: [10.1073/pnas.2610441123](https://doi.org/10.1073/pnas.2610441123). Bibliographic record verified; complete correction text not retrieved.
- **R1. Sodelin project repository.** [Voluntary Political Sworn-Statement Pilot](#). Read README, audit/PROJECT_CONTROL.md and operations/DGG_PILOT_CONTROL_PACKET.md; checked main at the same commit on September 5, 2026. Repository descriptions of audit status are the project's descriptions, not a signed attorney opinion.
- **R2-R6. Active project PRs.** [PR #1](#), [PR #2](#), [PR #3](#), [PR #4](#), [PR #5](#). Exact checked heads and scope appear in section 4.1a. They are not court or counsel determinations.
- **D1-D11. User-supplied documents.** Full filenames and functions are listed in section 4.1. PDF page references refer to D9's printed page numbers. Word references use named sections because repagination can change page numbers.

Source relationships. D2 and D3 are linked versions of the same earlier packet. D5 defers to the canonical legal memorandum. D9 extends the prior proposal with a schedule, cost assumptions and evaluation design. D10 and D11 clarify interstate and feasibility scope. These are relationships between documents; they are not independent replications of a legal or empirical result.

Citation caution. A citation to a statute documents the statutory rule, not necessarily its resolution in this new factual setting. A citation to a program page documents the program description, not its effect. A citation to an experiment documents that experiment, not a forecast of this proposal's outcome.

11. Process review

Process-integrity finding: This work is a targeted, source-traceable comparison with explicitly incomplete review coverage. It is not a systematic review or a completed legal implementation audit. No process score is assigned.

Review domain	Work actually completed	Remaining limit or reproducibility item
Corpus	Eleven supplied documents extracted and divided among reviewers; coordinating comparison and current repository check.	Attachments are related drafts, not independent sources of corroboration.
Search	Primary legal text, official program and institutional guidance, and original research targeted to consequential questions.	No registered protocol, exhaustive database search or complete case citator.
Inclusion	Materials bearing on the defined Washington proposal and Pennsylvania comparison.	No fifty-state survey or investigation of every possible operator/entity type.
Extraction	File identifiers, sections, PDF page references, dates and selected claims recorded.	No claim that every quotation, hyperlink and authority in all earlier drafts was revalidated.
Independent review	Separate comparison, legal, empirical and operations lanes; coordinator reconciled the findings.	Shared inputs and AI reviewers are not independent human legal opinions.
Bias	Source distinctions and conflicting versions retained; adverse or uncertain applications reported.	The project-origin documents share an interest in developing the concept; duplicate drafts cannot compensate for absent outcome data.
Protocol deviations	Repository verification, open-PR/comment review and nonprofit/debate guidance added when coordination and institutional questions became material.	Targeted additions were not a prospectively registered search strategy.

AMSTAR-2 is designed for systematic reviews of healthcare interventions, and RoB-2 for randomized trials. Neither is applied here as a numerical rating of a legal proposal. Trial-specific risk-of-bias evaluation would require the relevant trial materials; a complete systematic-review appraisal would require its protocol and methods record.

12. Inference review

Robustness finding: Legal mechanisms and existing programs are documented. The specific program's effects and organizational acceptance remain unmeasured in the supplied record. This review performs no new meta-analysis and assigns no policy or political score.

Quantitative limits. No new pooled estimate, Q , tau-squared, I-squared, funnel analysis or Egger test is calculated. Multiple claims per speaker are clustered observations. Experimental tasks, populations, oath wording, incentives, outcome definitions and publication methods differ; those differences limit direct transfer.

Rival explanations. Preparation time, question selection, participant self-selection, editorial review, demand effects and reduced information output could explain a lower observed error count. A changed audience impression could reflect the seal's appearance rather than better truth discrimination. [D8-D9; E1-E2]

Counterfactuals. If factual output changes equally with an ordinary signed record, that would not isolate an oath contribution. If errors fall while substantive answers fall, the result needs both denominators. If audiences trust both correct and incorrect claims more, trust alone does not demonstrate improved calibration. Actual adoption requires documented decisions, regardless of any experimental result.

13. Zotero and Obsidian integration

The companion Markdown is an editable research note. The source register records a stable ID, title, URL, type, verification date and relationship to a claim. This packet does not claim that a Zotero collection, Better Notes item, attachment or Related link has already been created in the user's account.

Zotero organization. A collection named Voluntary Factual Statements / Consolidated Review / 2026-09-05 can distinguish source materials from project drafts. Statutes, cases, government guidance, journal articles and program pages have different item types. An import file cannot guarantee that every legal pinpoint maps perfectly; check section, court, date and reporter fields after import.

Suggested tags describe content, not quality ratings: jurisdiction:WA, jurisdiction:PA, topic:notarial-act, topic:criminal-jurisdiction, topic:recording, topic:campaign-procedure, evidence:experiment, document:project-draft, question:unresolved-application, and effective:2027-01-01.

Relationships to record explicitly: D2 is-version-of D3; D5 explains-origin-of D6; D9 extends-design-of R1; D11 limits-inference-from D10; L2 governs-date-branch-of the remote workflow; E1/E2 tests-analogue-of the behavioral hypothesis. These textual relationship labels describe the record. Zotero's Related links are manually associated links, not automatic typed relationships created by this report.

Obsidian note fields. A claim note can contain claim_id, exact proposition, source item key, pinpoint, applicable jurisdiction, effective interval, what the source establishes, what remains unresolved, related decision ID and date last checked. A decision note can link the competing versions and record the authorized decision without rewriting the original source.

Synchronization scope. The packet is prepared for import and subsequent project use. No partner outreach, live-program publication or Zotero-account modification is represented as completed by creating it. GitHub synchronization is recorded separately in the dated coordination note, with exact commit and PR references.

14. Appendix: decision and handoff records

14.1 Decision record template

Field	Information to enter
Decision ID and scope	Example: DEC-PUBLISH-001; named nonparticipant status policy.
Versions compared	Exact source document, section and commit or dated attachment.
Existing formulations	Reproduce or summarize each formulation without silently merging them.
Deciding authority	Actual person/body and the authority under which it decides.
Evidence considered	Source links, relevant facts, contrary evidence and limits.
Decision and rationale	Selected wording, deferred question, or request for more information.
Effective version	Date, scope, treatment of pending records and superseded wording.
Follow-up	Responsible person, needed evidence and review trigger.

14.2 Review questions for a concrete adoption packet

These fields distinguish a complete review record from a proposal that merely describes future work. They do not recommend a particular institutional or legislative choice.

Record	Questions the document would answer
Decision brief	What exact action is being considered, by whom, and over what scope?
Operative document	Is the instrument an organizational resolution, contract, agency action, appropriation or bill? What text actually changes?
Authority statement	What existing authority is used, or what new authority is expressly sought?
Roles and appointments	Who operates, reviews, hears appeals, controls publication and holds records?
Eligibility procedure	Which candidates/participants are eligible, how are invitations logged, and how are capacity limits handled?
Final workflow	Which act, forms, platform, locations and statutory versions are covered?
Funding and obligations	What are actual funds, quotes, staffing commitments, liabilities and continuing custody costs?
Participant materials	What does the person receive, adopt, consent to, decline or correct at each stage?
Publication and challenge rules	What appears publicly, what can be challenged, who decides, and when?
Records schedule	What is public or restricted, what is retained, who can access it, and what survives closure?
Evaluation protocol	Which question, comparison, outcomes, units, missing-data rules and publication commitments apply?
Conditional approvals	Which exact documents and facts were reviewed, by whom, with what limitations?
Revision history	Which prior provisions are amended, retained or left unresolved?

14.3 Organizational review and continuation

1. Which parts of the described procedure does your organization understand as participation, evidence review, publication or legal attestation?
2. What authority would your organization have to commit funds, staff, branding or participation?
3. Which provision would you need clarified or changed, and what exact wording is at issue?
4. Who would control questions, review, conflicts, appeals and public corrections?
5. Which factual claims about law or effectiveness would require further evidence before your organization could decide?
6. Would a decision cover a rehearsal, a research study, an operating program or legislation?

These questions collect the respondent's actual position. They do not presume agreement, attribute motives to disagreement, or tailor political persuasion to a party.

14.4 Handoff for another reviewer

"Read this consolidated comparison and the eleven source documents. The Washington main branch was checked at commit 3905b470c2ab239cf2aae563e1d7b3a1adb73dd3; five open PR heads and selected review records are listed in section 4.1a. Read those active tracks as well. Do not infer that the September attachments amended that repository. For each proposed change, identify the source provision, current authority, factual gap and exact text affected. Keep authority, execution, recognition, liability, publication and program effects separate. Record unresolved questions rather than inventing approvals or evidence."

The packet establishes a common reference for further review. The remaining institutional, legal and empirical decisions are expressly identified rather than represented as already completed.
