

# Implementation and Interview Design Toolkit

Fictional/tabletop review edition - not a live script

---

- + A phased implementation model with explicit stop conditions and counsel gates
- + Question screening, role separation, mock record controls, and session sequencing
- + Messaging, objection handling, comprehension testing, and release controls
- + Two synthetic planning worksheets with signature and notarial execution disabled

AI-assisted discussion draft for recipient review only. Internal review found changes required; not DGG-approved, counsel-approved, or launch-cleared. Not legal advice. Current Phase 0 permits fictional/tabletop work only - no real signer, oath, notarial act, candidate outreach, recruitment, or live interview. Authority cutoff: August 30, 2026.

Prepared August 30, 2026  
Content assembled from the project research repository.

**How to use this attachment**

This attachment is designed to make the underlying idea easy to evaluate. It does not ask the recipient to adopt the legal conclusions, recruit a participant, sign a statement, or perform a notarial act. Independent Washington counsel should review the exact facts, form, script, consent process, and public claims before any real-world activity. Every worksheet and sequence in this attachment is for fictional/tabletop review only; blank fields are planning prompts, not a participant form.

## Part I - Implementation Levels and Counsel Gates

### 16. Recommendation

DGG should authorize only a **Phase 0 counsel-and-synthetic/tabletop build**. Any later pilot remains subject to cure of the internal adversarial audit remand and a new approval record.

#### Phase 0 - legal and technical validation

- final Washington counsel opinion on the exact form and false-swearing language;
- participant-state checklist;
- independent notary consulted on lawful completion/refusal, without asking the notary to approve content, select the certificate for DGG, or certify voluntariness;
- layered consent/release and privacy schedule;
- pure mock using fictional facts with no oath or notarial act; separately document, but do not execute, any proposed actual-test branch until a reviewed supersession closes the remand and limits it to literally true, personal-knowledge statements about the test itself;
- accidental-trigger tabletop exercise;
- immutable record/hash and correction-chain test;
- comprehension test for the public disclaimer; and
- external symmetry/bias review.

#### Phase 1 - deferred and not authorized

No Phase 1 activity begins until a reviewed supersession closes every mandatory remand item. Any later proposal must use the approved exact architecture, no livestream, a small number of advance prompts, a separately approved participant/location configuration, counsel review before any publication, full methodology/limitations, and a preregistered evaluation.

#### Phase 2 - decision

Expand only if the pilot improves factual precision or audience calibration, the disclosure is understood, refusals remain neutral, and no serious legal, privacy, notary-independence, or partisan-symmetry failure occurs.

### 17. Counsel gates before any live use

Washington counsel must answer in writing:

1. Does the exact proposed oath/verification satisfy current RCW 42.45 and chapter 308-30 WAC?
2. Is the 2026 fixed-record branch correctly separated from the 2027 standalone remote-oath branch?
3. How should *Hovrud* and the 1995 amendment be stated in participant notice?
4. Is the false-swearing description fair and sufficiently noncoercive?
5. Can the particular implementation plausibly be an official proceeding, and may DGG mention that perjury theory publicly?

6. What Washington nexus is required for each participant/location configuration?
7. How do limitations and nonresident tolling apply?
8. What correction, preservation, and referral procedures minimize obstruction, spoliation, or witness-related risk?
9. Does the recording/release architecture comply with all applicable jurisdictions?
10. What facts would require DGG to stop, preserve, notify, or obtain emergency advice?

No document should be labeled “launch-cleared” until the internal adversarial audit remand is closed through a reviewed supersession and these answers, the participant-state review, and the notary's limited written workflow confirmation are stored outside the public repository.

## Part II - Tabletop Interview Design

### 1. Authorized Phase 0 shape

The pilot has three lanes that must remain visibly and operationally separate:

| Lane                       | Content                                                                                    | Legal treatment                                                                                                                                                                                                                                          | Publication treatment                                               |
|----------------------------|--------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| A - test record            | Fictional assertions in a mock-only replica; a tangible paper CSR is a future design model | Current work uses fictional facts only with no real signer, oath, or notarial act. Any later authorized verification would be limited to literally true, personal-knowledge statements about the test itself, with the exact CSR as the sole oath object | No participant exists or is identified in current Phase 0           |
| B - ordinary interview     | Analysis, policy, predictions, opinions, advocacy, and follow-up                           | Unsworn                                                                                                                                                                                                                                                  | Label as unsworn; ordinary editorial process applies                |
| C - no sworn participation | Synthetic decline, question-level decline, or no response                                  | No adverse legal inference                                                                                                                                                                                                                               | Do not publish identified invitation/refusal status through Phase 2 |

Current Washington law contains a safeguarded record-based remote-notarization route, but it is quarantined research for this project. Present DGG Phase 0 is only a pure fictional mock with no real signer, oath, or notarial act. A nonpublic, in-person, Washington-only, wet-ink tangible-paper workflow is retained solely as a possible future design model after reviewed supersession and every gate. That future preference would be a project policy choice, not a claim that remote notarization is generally unavailable.

### 2. Stop conditions

The Phase 0 lead must stop or move the item to the synthetic unsworn lane if any of these conditions occurs:

- the question is vague, predictive, rhetorical, value-laden, compound, or outside personal knowledge;
- a real target/public-figure participant is proposed;
- the synthetic participant script has not received the prompt and notice in advance;
- the participant asks to consult counsel, pause, qualify, say unknown, or decline;
- voluntariness, capacity, identity, or language comprehension is in doubt;
- the notary refuses, pauses, or cannot complete the lawful in-person workflow;
- the displayed record differs from the record to be signed;
- any participant has not consented to each applicable recording;
- the notary is not physically in Washington, lacks a current commission, or has a disqualifying direct beneficial interest;
- the exact tangible CSR, compliant certificate, identity process, journal handling, or record-integrity controls cannot be completed;
- anyone believes an answer or the record may be inaccurate; or
- counsel has not cleared the participant's location and the publication plan.

No host, producer, or campaign representative may overrule the notary.

### 3. Role separation

| Role                 | May do                                                                                                                                         | Must not do                                                                                                                                                                                                                          |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DGG session lead     | Explain choices, ask approved prompts, pause, document status                                                                                  | Administer the oath, select the notarial certificate, threaten referral, or characterize guilt                                                                                                                                       |
| Participant          | Review, answer, qualify, say unknown, decline, correct, sign, consult counsel                                                                  | Be pressured to guess or waive required rights                                                                                                                                                                                       |
| Independent notary   | Control lawful completion or refusal, identity, oath, signature, certificate execution, and any required journal                               | Approve proposition content, sources, wording, legal sufficiency, or certificate selection for DGG; certify truth, capacity, competence, or voluntariness; endorse DGG; surrender original journal control; accept editorial control |
| Production custodian | Maintain DGG's consented master, transcript, hash, access log, and correction chain                                                            | Obtain KBA answers, credential images, seal credentials, notary journal, or the notarial archive for publication                                                                                                                     |
| Counsel              | Select/approve the requested act and certificate form; approve exact forms, claims, jurisdiction, release, preservation, and incident response | Treat this packet as a substitute for fact-specific advice or ask a nonattorney notary to practice law                                                                                                                               |
| Editorial reviewer   | Check exact status, context, symmetry, disclaimers, and material edits                                                                         | Imply that notarization proves truth or refusal proves dishonesty                                                                                                                                                                    |

### 4. Phase 0 setup control sheet

Complete and retain outside the public repository:

- ☐ DGG ownership, FEC status, payment sources, and campaign relationships documented.
- ☐ Objective invitation criteria approved and applied symmetrically.
- ☐ No real signer, target, or public-figure participant and no notarial act is used while the remand remains open.
- ☐ Test mode is documented as a pure mock with fictional facts and no oath or notarial act; any actual verification is only a future design scenario.
- ☐ The mock never represents that a notarial act occurred, and no fictional role-play assertion is placed under oath.
- ☐ Broadcast, campaign-finance, coordination, debate, professional-ethics, privacy, publicity, and recording triggers reviewed.
- ☐ No notary is engaged to perform an act; any future notary-selection and conflict check remains a post-remand gate.
- ☐ Exact prompts, definitions, time periods, answer choices, tangible CSR, requested act, compliant certificate, and script are selected or approved by counsel.
- ☐ Written release, recorded-consent script, privacy schedule, and correction policy approved.
- ☐ No livestream; prepublication review is mandatory.
- ☐ A Phase 0 test has passed the technical and legal checklist without placing fictional facts under oath.

### 5. Question admission test

A question enters Lane A only if every answer below is yes:

1. Can evidence establish the proposition as true or false?
2. Does it identify the relevant actor, action or condition, and date or period?
3. Are every material term and exception defined neutrally?
4. Can the participant answer from personal knowledge or an identified record basis?
5. Does the form allow unknown, qualification, and decline without penalty?
6. Would DGG ask the same formulation of a similarly situated person with different politics?

7. Is swearing this proposition more useful than ordinary reporting?
8. Has counsel approved its inclusion, without asking the notary to approve content?

Any no moves the item to Lane B or removes it.

## 6. Tabletop record-control fields for a possible future actual test

The current mock should display the fields that a future counsel-approved Lane A record might include, without collecting a real signature or performing an act:

- unique record ID and version;
- creation timestamp and cryptographic hash;
- a synthetic placeholder only; a future actual-test record would use only the signer's required name and relevant capacity in a private CSR kept outside the public repository, with no unnecessary identifier;
- voluntary-choice and notary-limitation notice;
- defined scope, time period, and terms;
- each exact prompt and exact selected or qualified response;
- source-of-knowledge field;
- unknown, qualification, and decline options;
- pre-signing review and correction acknowledgment;
- counsel-approved oath or affirmation language;
- simulated participant-signature and timestamp fields; and
- a visibly fictional certificate placeholder that cannot be mistaken for a completed notarial certificate.

The tabletop should model the future rule that the exact CSR alone would be the oath object, without incorporating a transcript, production record, source packet, annotation, or later commentary by reference. It should also model immutability: a hypothetical substantive post-execution change would require a completely new version, signature, oath or affirmation, compliant certificate, any required journal entry, and an append-only link to the superseded record. Nothing is executed in the current mock.

## 7. Controlled session sequence

This sequence is retained only as a tabletop model of a possible future actual test verification containing literally true statements about the test itself. It must not be executed while the remand remains open. The current pure mock may simulate the controls but must not administer an oath, obtain a sworn signature, or perform a notarial act.

1. **Model opening and roles.** Simulate explaining that a future sworn record and ordinary interview would be separate.
2. **Model layered consent controls.** Compare a reasonably effective recorded announcement and any stricter written pre-consent policy. Distinguish a hypothetical legally required notarial record from DGG's hypothetical production recording and publication license.
3. **Model voluntariness.** Display the future rights to stop, consult counsel, answer unknown, qualify, or decline without an adverse inference.
4. **Model the in-person workflow - do not enter it.** Show that a future notary would control lawful completion/refusal, identity, execution of the requested act, certificate, and any required journal entry.
5. **Model fixed-record review.** Use a fictional participant placeholder to review the complete mock version, attachments, and qualifications.
6. **Model correction before signing.** Resolve fictional ambiguities without coaching an answer.

7. **Model signature and oath fields - do not sign, swear, affirm, or notarize.** Use only conspicuous placeholders; complete no participant signature, oath, certificate, journal entry, or notarial act.
8. **Model immutability.** Demonstrate that a future executed CSR would not be edited and that a substantive correction would require a completely new act and append-only link; promise no statutory defense.
9. **Model express closure.** Mark the end of the fictional Lane A before any Lane B discussion.
10. **Model reconciliation.** Hash the fictional CSR and mock production master; simulate certificate and access-log checks without creating or obtaining any notarial record.
11. **Quarantine the mock output.** Retain only fictional Phase 0 review material; no participant record or participant publication exists or is authorized.

Remote interruption rules remain research only. If a future approved route causes a remotely located individual to exit the workflow, WAC 308-30-310 requires identity verification to restart; a transient glitch that does not cause workflow exit is not automatically the same trigger.

## 8. Synthetic participant-notice test - controlled substance

The final notice must be written by or approved by counsel. At minimum, it must communicate:

- participation and every question are voluntary;
- the participant may stop, consult counsel, say unknown, qualify, or decline;
- refusal or silence does not imply dishonesty, falsity, guilt, or unwillingness to answer;
- the notarial certificate evidences the act and specified legal determinations - not factual truth, legal sufficiency, capacity, competence, or voluntariness;
- a knowingly false statement under a Washington-authorized oath may have legal consequences, with false swearing the clearest possible reference point;
- first-degree perjury, Washington jurisdiction, charging, conviction, and interstate process require additional independent elements and decisions;
- an unqualified assertion about something the participant does not know can be treated under RCW 9A.72.080 like a knowingly false statement;
- correction must occur before execution; a substantive post-execution correction requires a completely new act and is not a promise of immunity or a statutory defense; and
- the recording, publication, retention, and correction terms.

## 10. Suspected-inaccuracy protocol

If anyone believes a Lane A answer may be inaccurate or outside the participant's knowledge:

1. pause questioning and any stream or publication;
2. do not accuse, coach, negotiate, threaten, or promise immunity;
3. offer correction, qualification, unknown, decline, and counsel access;
4. before execution, permit participant-controlled correction and refreeze the complete CSR; after execution, require a completely new act for any substantive correction;
5. preserve every executed original without alteration, deletion, backdating, or silent replacement;
6. mark all related production material restricted and unpublished;
7. notify authorized counsel under the incident plan;
8. document the pause, choices offered, access, and decisions;
9. create any later correction as an append-only new record; and

10. obtain counsel approval before publication, referral, response to legal process, or destruction.

The notary remains responsible for any legally required journal and, for a future remote route, audiovisual archive. As project policy, DGG must not direct destruction or place notarial compliance records in the public repository. The ordinary journal rule has a documented attorney-notary exception, and an authorized third-party audiovisual repository does not shift the notary's responsibility.

## 11. Synthetic prepublication tabletop

No real publication is authorized. Apply this list only to a synthetic mock-up:

- ☐ Published record matches the signed version and hash.
- ☐ Certificate is complete, contemporaneous, and correctly associated; venue is the notary's physical Washington location.
- ☐ No post-signing edit is represented as part of the sworn record.
- ☐ DGG production footage is distinct from the notarial archive and within the release.
- ☐ No journal, credential, KBA, seal-security, address, or unnecessary identity data appears.
- ☐ Transcript and captions were checked against the unedited DGG master.
- ☐ Editing does not change the material meaning or create a false implication.
- ☐ Participation status exactly matches the log.
- ☐ Notary limitation and anti-inference disclaimers are adjacent and prominent.
- ☐ Correction or dispute is displayed accurately and append-only.
- ☐ The mock-up is clearly synthetic and contains no real participant, contact, identity, or privileged data.
- ☐ Counsel reviewed the hypothetical publication analysis without treating it as live approval.
- ☐ Symmetry reviewer found no unexplained partisan difference in invitation, prompts, labels, or presentation.

## 12. Phase 0 acceptance test

Use a pure mock with fictional facts and no real signer, oath, or notarial act. The tabletop may separately model a future actual workflow limited to literally true, personal-knowledge statements, but must not execute it. Never place a fictional role-play assertion under oath. Phase 0 passes only if:

- when actual-test mode is used, the notary can complete the approved act and retain required records without transferring restricted notarial data to DGG;
- each signed version, certificate, production master, hash, and access log reconciles;
- the in-person identity, physical-appearance, requested-act, certificate, and journal controls reconcile;
- an intentional wrong-record display is detected before signing;
- unknown, qualification, decline, and correction paths all work without pressure;
- the team successfully quarantines a simulated inaccurate answer;
- a prespecified audience test shows that the one-sided 95% lower confidence bound for correct notary-role comprehension is at least 90%;
- the neutral status/disclaimer does not imply dishonesty; and
- counsel signs the go/no-go record.

Failure of any legal, consent, identity, record-integrity, privacy, comprehension, or symmetry control blocks Phase 1.

## 14. Required approvals before live use

| Approval                           | Minimum scope                                                                                                                                                               |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Washington criminal/notary counsel | Exact act, record, jurat, warning, correction, jurisdiction, preservation, and public claims                                                                                |
| Media/privacy counsel              | Recording, release, editing, publication, security, retention, and incident response                                                                                        |
| Participant-state counsel          | Local notary recognition, criminal law, recording, privacy, publicity, defamation, and interstate process                                                                   |
| Commissioned notary                | Commission/conflict status, identity flow, lawful completion/refusal, certificate execution, journal handling, and right to stop - without content approval or legal advice |
| DGG editorial lead                 | Symmetry, exact statuses, disclaimers, corrections, and no misleading implication                                                                                           |

No single approval substitutes for the others. Even after approvals, the internal adversarial audit remand must be closed through a reviewed supersession before live use. This packet authorizes only synthetic/tabletop Phase 0 work.

## Part III - Messaging and Review Toolkit

### Recommended tool stack

| Priority | Tool                                                              | Why it comes now                                                                                                                          | Release condition                                                                            |
|----------|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| 1        | “Two-page explainer” derived from the detailed information packet | Establishes one stable main message and keeps the critical limitations visible.                                                           | Intended-reader comprehension test passes.                                                   |
| 2        | Annotated, entirely synthetic claim record                        | Shows the difference between provenance and truth certification better than abstract copy alone.                                          | Counsel confirms that no live form, jurat, or legal effect is implied.                       |
| 3        | “What it does / does not do” FAQ                                  | Directly tests the most dangerous misconceptions.                                                                                         | Open-ended paraphrases match the intended meaning.                                           |
| 4        | Audience-specific one-page briefs                                 | Lets voters, journalists, campaign counsel, notaries, and civic researchers see their distinct questions without changing the core claim. | Core wording remains identical and source IDs remain attached.                               |
| 5        | Listening-session deck                                            | Supports structured feedback before public persuasion.                                                                                    | Session script, consent, recording, and data-retention rules approved.                       |
| 6        | Simple landing page                                               | Makes a stable, versioned packet accessible after testing.                                                                                | Accessibility, privacy, sponsor, lobbying, election-law, and public-records checks complete. |
| 7        | Short video and social copy                                       | Useful only after the longer text is understood; short formats can erase limitations.                                                     | Every version displays or links the same adjacent limitations and passes a separate test.    |
| 8        | Paid or election-period distribution                              | Highest classification, coordination, disclosure, and reputational risk.                                                                  | Fact-specific written campaign-finance/lobbying clearance and expenditure tracking.          |

The current transparent-repository ask is: **“Review the proposal, paraphrase it, and identify safeguards that are unclear.”** A managed comprehension-test invitation is not authorized until the infrastructure and approvals below exist. The ask is not “take the oath,” “ask why a candidate refused,” or “support this bill.”

### Message house

#### Core message

*DGG is studying an optional, source-linked way for a speaker to place selected, narrowly framed factual claims into a stable sworn record. The signer declares the statement true under oath. The notary checks required identity and signature, administers the oath or affirmation, and completes the notarial certificate; the notary does not investigate or certify the political claim. DGG will draw and publish no adverse inference from nonparticipation. Because DGG cannot control third-party reactions, Phase 0 publishes no invitation, participation, refusal, or nonresponse status.*

#### Supporting point 1: provenance

The product is the exact statement, its scope and date, the speaker’s knowledge basis, cited sources, version identifier, and correction history - not a “true/false” badge.

#### Supporting point 2: separation

Facts suitable for a narrow record remain distinct from opinions, predictions, values, rhetoric, humor, and ordinary unsworn discussion.

### Supporting point 3: falsifiable research

The project tests whether the format improves precision, qualification, correction, or audience calibration without increasing coercion, partisan asymmetry, or false confidence.

### Mandatory limitation

No false answer automatically proves a crime or triggers prosecution. Any possible legal consequence depends on the exact statement, applicable elements, evidence, jurisdiction, and official discretion.

### Audience map

| Audience                                   | What they need first                                                                             | Appropriate present-phase ask                                            | What not to ask yet                                                       |
|--------------------------------------------|--------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|---------------------------------------------------------------------------|
| Washington voters                          | Plain explanation and synthetic example                                                          | Explain the idea in their own words; flag confusing or coercive language | Endorse, share candidate labels, or contact a campaign                    |
| Journalists and civic communicators        | Editorial role, source record, correction rules, constitutional risks                            | Critique clarity, newsworthiness, and false-impression risks             | Treat the packet as a launched program or “truth test”                    |
| Campaign staff and counsel                 | Exact legal limits, neutrality, coordination, invitation, and data rules                         | Confidentially identify missing factual predicates or unfair burdens     | Invite a candidate or negotiate participation                             |
| Notaries and notarial counsel              | Proposed act, independent role, certificate responsibility, records segregation                  | Review whether the workflow asks a notary to exceed the role             | Approve content, select DGG’s certificate, or become spokesperson         |
| Civil-liberties and election-law reviewers | <i>Rickert</i> , <i>119 Vote No!</i> , <i>Alvarez</i> , <i>Ancheta</i> , disclosure/forum issues | Red-team coercion, state action, viewpoint, and disclosure risks         | Validate a public badge, refusal list, or government truth panel          |
| Researchers and evaluators                 | Hypotheses, estimands, harms, sampling, and test instruments                                     | Review preregistration and synthetic comprehension protocol              | Claim efficacy from existing oath studies                                 |
| Legislators or agency staff                | Only a public-record-safe, candidate-neutral research brief                                      | Identify legal questions without requesting action                       | Receive privileged strategy or be asked to sponsor before lobbying review |

### Approved and prohibited phrases

| Avoid                                                       | Prefer                                                                                                              | Basis                                                |
|-------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| “Truth-certified” or “notary-verified truth”                | “Source-linked sworn record; the signer declares truth and the notary administers and certifies the act”            | NOTARY - TRUTH - 01                                  |
| “Official truth pledge”                                     | “Proposed private, voluntary research format; entity and control facts remain verification gates”                   | CONST - PRIVATE - 01,<br>CONST - GOV - REGISTRY - 01 |
| “Refused the oath” or “declined to tell the truth”          | Publish no participation status; DGG draws no adverse inference                                                     | DEFAM - LABEL - 01,<br>CONST - COERCION - 01         |
| “Perjury-proof,” “automatic felony,” or “prosecution-ready” | “Any possible consequence depends on applicable law, facts, elements, proof, jurisdiction, and official discretion” | WA - FS - 01, WA - PERJ - 01,<br>WA - PROOF - 01     |
| “Court-approved” or “judicially remanded”                   | “Internal review found changes required; no court reviewed or remanded this project”                                | Repository provenance control                        |
| “Audited” without a defined method                          | “Source reviewed on [date] using [method], with listed unresolved items”                                            | Publication gate                                     |
| “Makes politicians honest”                                  | “Tests whether structured provenance improves precision or audience understanding”                                  | EMP - TRUST - 01                                     |
| “Washington will extradite a liar”                          | Do not use extradition as promotional copy                                                                          | WA - EXTR - 01                                       |
| “Declining has no consequences”                             | “The project publishes no adverse inference; independent political consequences cannot be promised away”            | Accuracy rule                                        |

## Ready-to-test copy

These examples are candidate test stimuli, not approved public copy.

### 30-second description

*We are studying a voluntary format that separates a few narrow factual commitments from ordinary political discussion. A willing speaker could sign an exact, source-linked statement and swear or affirm it before an independent notary. The notary would check required identity and signature, administer the oath or affirmation, and complete the certificate - not investigate the political claim. People may qualify, say they do not know, use the unsworn lane, or decline, and no participation status would be published. The current work is a synthetic comprehension test, not a live candidate program.*

### 90-second description

*Political interviews routinely combine checkable facts with opinions, predictions, and advocacy. This proposal asks whether a speaker and audience benefit when a few suitable factual claims are placed in a stable record with exact wording, a knowledge basis, sources, a version identifier, and a correction history. A notary could administer and certify a future authorized act but would not fact-check the claim. Washington law supplies possible oath and false-swearing questions, while perjury, jurisdiction, proof, and prosecution require separate elements and decisions. Strong constitutional authority also warns against government truth adjudication, candidate badges, public refusal lists, or coerced pledges. Present Phase 0 is only a private, nonpublic, candidate-neutral fictional mock with no signer, oath, or notarial act. DGG's legal entity, funding, control relationships, and government contacts remain launch gates and have not yet been verified. We are asking reviewers to test the explanation - not to sign or recruit anyone.*

### Reviewer invitation email

**Subject:** Help test a candidate-neutral explainer about a voluntary sworn-record idea

*We are conducting a nonpublic comprehension and risk review of a civic-research proposal. The proposal would let a willing speaker distinguish selected factual commitments from ordinary unsworn commentary in a source-linked record. It is not a live candidate program, a truth certification, or an automatic criminal process. We would like you to read a short packet, paraphrase the idea, and identify legal, clarity, privacy, accessibility, coercion, or partisan-symmetry problems. You will not be asked to swear, endorse the proposal, contact a candidate, or support legislation.*

### Landing-page header

***Can an exact, source-linked claim record improve clarity and correction without turning a notary into a truth judge? A candidate-neutral research proposal under legal and comprehension review. Not a live program.***

## Objection handling

### “Isn't this a government truth commission?”

Present Phase 0 is only a private, nonpublic, candidate-neutral fictional mock with no signer, oath, or notarial act. DGG's entity, funding, control relationships, and government contacts are not yet verified. The design contains no government truth verdict, complaint decision, badge, refusal registry, or benefit/penalty. A later government role would require a new constitutional, forum, disclosure, public-records, and election-law analysis.

**“A notary cannot prove a claim is true.”**

Correct. The project must state that prominently. The signer declares truth; the notary checks required identity and signature, administers the oath or affirmation, and completes the certificate. The research question is whether exact provenance and formal commitment are useful - not whether the seal proves the content.

**“This is just a threat of prosecution.”**

It should not be marketed that way. Potential Washington false swearing is a fact-specific legal reference point; perjury and other consequences require additional predicates. The format should be valuable even if no one is ever investigated or prosecuted.

**“People can dodge with qualifications or refuse.”**

Those options are safeguards, not evasion. The study asks whether they reduce guessing and produce narrower, more accurate commitments. The project must not punish protected silence or opinion.

**“This will be used selectively against one party.”**

That is a central adverse hypothesis. Before any later outreach, criteria, prompts, timing, and review must be symmetrical and independently audited. Phase 0 uses no named candidate.

**“Why not make the state run it?”**

Government involvement adds constitutional truth-adjudication, compelled-speech, forum, disclosure, public-records, and election-administration problems. The current evidence supports testing a private provenance tool first.

## Comprehension and message-test plan

### Audience cells

Test separately with:

- Washington voters;
- journalists and civic communicators;
- campaign staff or counsel; and
- notary/legal reviewers.

Use only fictional names and facts. Do not use a real candidate's image, voice, statement, party, or race.

### Sequence

1. Begin with an initial planning range of five to eight cognitive interviews per audience cell; a methods reviewer must set any saturation or power rule rather than treating that range as evidence of adequacy.
2. Revise wording based on open-ended paraphrases, not preference alone.
3. Conduct usability and accessibility review.
4. Run a preregistered randomized comparison between the neutral explainer and candidate variants.
5. Repeat cognitive interviews after any material change.

### Must-pass questions

Without looking back, a reader must correctly state that:

- participation and question-level answers are optional;
- declining does not imply dishonesty;
- the notary does not certify factual truth;

- a false answer does not automatically establish perjury or prosecution; and
- the project is research, not a live candidate program.

### Proposed safety threshold

At least 90% correct comprehension on each high-risk proposition, using a predeclared confidence rule, and no meaningful increase in either dangerous misconception relative to neutral control copy. This threshold is a project recommendation - not a legal standard or established universal optimum.

### Additional measures

- unaided main-message recall;
- open-ended paraphrase;
- perceived coercion and unfair surprise;
- perceived partisan favorability and symmetry;
- false confidence in the notary or operator;
- trust calibration rather than raw trust;
- intended action;
- reading time and dropout;
- accessibility problems; and
- privacy concern.

If readers can repeat the disclaimer but still describe the product as a truth certification or refusal test, the copy fails.

## Channel-test matrix

Raw reach, clicks, views, and shares never outrank comprehension, coercion, false-confidence, privacy, or partisan-symmetry measures.

### Record 1

**Stage: 1****Audience:** Invited independent reviewers**Asset:** Two-page brief plus synthetic example**Distribution channel:** Closed, individually addressed reviewer email**Objective:** Find misconceptions and missing risks**Comprehension metric:** Unaided paraphrase plus five must-pass items**Harm metric:** Coercion, truth-certification, refusal-inference, privacy concern**Cost record:** Staff time and incentives**Stop rule:** Stop on any uncontained serious misconception or confidentiality issue**Required approval:** Methods, privacy, legal

---

### Record 2

**Stage: 2****Audience:** Small usability sample**Asset:** Accessible HTML/PDF packet**Distribution channel:** Controlled owned page or file link**Objective:** Test navigation, accessibility, and version stability**Comprehension metric:** Task completion and correct source/limitation recall**Harm metric:** Dropout, accessibility barrier, unintended sharing**Cost record:** Hosting and remediation

**Stop rule:** Stop on inaccessible content, version mismatch, or privacy failure

**Required approval:** Accessibility, privacy, legal

---

### **Record 3**

**Stage:** 3

**Audience:** Journalists, civil-liberties, notary, campaign, and research specialists

**Asset:** Audience brief and facilitator deck

**Distribution channel:** Small stakeholder briefing

**Objective:** Adversarial domain review

**Comprehension metric:** Accurate role and limit restatement

**Harm metric:** Endorsement confusion, selective framing, recording concern

**Cost record:** Staff/vendor time

**Stop rule:** Stop if session is characterized as endorsement, lobbying, or candidate outreach

**Required approval:** Audience-specific counsel and methods

---

### **Record 4**

**Stage:** 4

**Audience:** Earned-media reviewers

**Asset:** Press backgrounder and source sheet

**Distribution channel:** Direct briefing only

**Objective:** Test whether reporting preserves limitations

**Comprehension metric:** Published-draft or headline comprehension review

**Harm metric:** Sensational criminal framing or refusal stigma

**Cost record:** Communications time

**Stop rule:** Stop if adjacent limits cannot survive editing

**Required approval:** Media and campaign-finance counsel

---

### **Record 5**

**Stage:** 5

**Audience:** General synthetic-test audience

**Asset:** Short video/social variants linked to full packet

**Distribution channel:** Organic owned channels

**Objective:** Compare concise formats after long-copy validation

**Comprehension metric:** Five must-pass items by variant

**Harm metric:** False confidence, coercion, partisan skew

**Cost record:** Production ledger

**Stop rule:** Stop if any variant underperforms the neutral control on a safety metric

**Required approval:** Legal, privacy, methods, accessibility

---

### **Record 6**

**Stage:** 6

**Audience:** Any paid or election-period audience

**Asset:** Only separately cleared asset

**Distribution channel:** Paid, broadcast, cable, platform, or mass communication

**Objective:** No objective presumed; requires a new plan

**Comprehension metric:** Predeclared metric

**Harm metric:** Coordination, sponsor, reporting, lobbying, targeting, reputational harm

**Cost record:** Full expenditure and in-kind ledger

**Stop rule:** No release without written classification and approval

**Required approval:** Campaign-finance, lobbying, media/privacy, entity counsel

---

## Operational research tools still required

Before Stage 1, create and version:

- a recruitment screener excluding candidates, campaign agents, and confidential case facts from Phase 0;
- a feedback form with unaided paraphrase captured before prompted questions;
- a facilitator script and no-persuasion instruction;
- a privacy/recording notice, nonrecorded option, withdrawal rule, and retention schedule;
- an issue log linking each finding to copy, owner, disposition, and retest;
- audience-specific source sheets that preserve the same core limitations;
- an accessible HTML/PDF checklist and remediation log;
- a channel cost and expenditure ledger; and
- a post-test decision memo recording continue, revise, or stop against preregistered rules.

## Compliance gate before distribution

Complete and retain a written classification for each release:

| Question                                                   | Evidence required                                                                           | Stop condition                                                                    |
|------------------------------------------------------------|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Who is DGG?                                                | Entity, ownership, tax/FEC status, decision authority                                       | Unknown or contradictory ownership/control                                        |
| Who pays?                                                  | Production, staff, distribution, amplification, and in-kind sources                         | Candidate, party, committee, or undisclosed payer unresolved                      |
| What is the purpose?                                       | Neutral research, legislative advocacy, candidate support/opposition, fundraising, or mixed | Copy or call to action does not match the classification                          |
| Who is named?                                              | Candidate, officeholder, ballot measure, party, sponsor                                     | Any named electoral subject before counsel clearance                              |
| How is it distributed?                                     | Website, email, meeting, broadcast/cable, paid social, organic social, direct message       | Unreviewed regulated medium or mass communication                                 |
| Was there candidate contact?                               | Dates, people, substance, material involvement, common vendors                              | Coordination facts unresolved                                                     |
| What was spent?                                            | Contemporaneous ledger and adjusted-threshold check                                         | No expenditure tracking                                                           |
| Is it lobbying?                                            | RCW 29B.50.100, WAC 390-20-150, current PDC threshold/timing analysis                       | "Contact lawmakers," "support/oppose," or similar language without classification |
| Is it political advertising or an independent expenditure? | RCW 29B.10.410, 29B.30.050, PDC sponsor/report analysis                                     | Candidate/ballot appeal without written clearance                                 |
| Does government receive it?                                | Recipient, purpose, agency use/retention, public-records review                             | Privileged, identifying, unreleased, or raw research material included            |
| Is audience research recorded?                             | All-party consent script, nonrecorded option, withdrawal and retention rule                 | Consent or data schedule absent                                                   |
| Is the version current?                                    | Claim IDs, sources, effective dates, source-record identifiers, counsel approvals           | Expired authority cutoff or unresolved material change                            |

## Release rule

No asset becomes approved for promotional distribution merely because it appears in this public repository. Promotional release requires the controlling remand to be closed through reviewed supersession, the factual predicates in the `facts and evidence packet` to be completed, applicable counsel approval, comprehension results, and a readback of the pushed GitHub state.

# Synthetic Interview Planning Worksheet

**FICTIONAL MOCK - DO NOT SIGN OR NOTARIZE**

Use this worksheet only to test clarity, question design, role separation, and stop rules. Do not enter a real person's identity, credentials, private information, political position, signature, oath, or notarial certificate.

|                         |                                                                                                                                                                              |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Mock test ID</b>     | Use a synthetic identifier; no person's name.                                                                                                                                |
| <b>Review objective</b> | What should the reviewer be able to understand or challenge?                                                                                                                 |
| <b>Fictional source</b> | Describe a fabricated public document or ledger used only for the mock.                                                                                                      |
| <b>Narrow claim</b>     | Write one objectively testable fictional proposition with a defined date and scope.                                                                                          |
| <b>Knowledge basis</b>  | State the fictional role's basis for answering; identify any uncertainty.                                                                                                    |
| <b>Answer choices</b>   | <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Qualified <input type="checkbox"/> Decline <input type="checkbox"/> Insufficient knowledge |

## Question admission check

- ☐ The prompt asks about a present or past fact, not opinion, prediction, intent, or advocacy.
- ☐ The proposition is narrow enough to answer without importing unstated assumptions.
- ☐ The relevant date, source, defined terms, and answer choices are fixed in advance.
- ☐ The fictional speaker may qualify, correct, or decline without any adverse label.
- ☐ The mock does not imply that a notary checks or certifies political truth.
- ☐ No real identity, signature, oath, notarial seal, or certificate is requested or created.

# Synthetic Session Review Record

## TABLETOP RECORD ONLY

Model the sequence; do not execute an oath, signature, identity verification, recording, or publication.

|                             |                                                                                               |
|-----------------------------|-----------------------------------------------------------------------------------------------|
| <b>Advance notice</b>       | What did the fictional participant receive before the mock session?                           |
| <b>Role separation</b>      | Who models interviewer, editor, records custodian, and independent notary roles?              |
| <b>Exact mock record</b>    | Identify the frozen fictional record and version used in the tabletop.                        |
| <b>Modeled correction</b>   | Describe any pre-execution change and how the mock version history records it.                |
| <b>Stop trigger</b>         | Record any ambiguity, coercion concern, privacy issue, or role confusion that stops the mock. |
| <b>Comprehension result</b> | Can reviewers explain what the notary would and would not establish?                          |
| <b>Required revision</b>    | What wording, control, or evidence must change before another tabletop round?                 |

## Disposition

- ☐ Revise and repeat fictional tabletop review.
- ☐ Escalate a legal question to qualified counsel.
- ☐ Escalate a methods, accessibility, privacy, or security question to the appropriate reviewer.
- ☐ Do not advance. A live interview remains unauthorized unless the remand is closed through reviewed supersession and every gate is documented.
